BL-07 - Student management (#7)

Scope

Admin-only creation, updates, deactivation/reactivation and permanent deletion of student profiles. All roles may view only their permitted student profiles via the BL-05 `visible_students` scope.

- Creating a student provisions a STUDENT account with username equal to uppercase roll number and a

one-time temporary password, using the existing account provisioning service.

- Class and section are validated together: the selected section must belong to the selected class.

`Student.home_section` is a home-section link; course-specific participation remains in `Enrollment`. It is nullable for pre-existing records but required by new student management forms.

- Roll numbers are immutable after creation because they are account login identifiers.

- Deactivation sets `User.is_active=False`. It keeps enrollments, attendance and audit entries.

New attendance workflows must exclude inactive accounts from new session sheets.

- Permanent deletion requires a reason and explicit confirmation. It deletes the account/profile,

enrollments and the student's attendance records, while retaining append-only audit events (BL-01 D-04).

Verification

```
python manage.py test apps.academics.test_student_management
```

Then `python manage.py test`, `python manage.py makemigrations --check --dry-run`, `ruff check .` and `ruff format --check .`.

Dependencies

Sections must exist for new student creation; the section management screens are delivered in BL-10.
